

Stakeholder Interview

Ideation Validation – VCH Lab

Purpose of the Interview

This interview is conducted to evaluate and compare multiple solution directions developed during the ideation stage. Each idea addresses the VCH Lab problem from a different perspective. The goal is to understand which ideas are most relevant, feasible, and effective, and whether they should be selected, rejected, or combined into a stronger final solution.

Interview Structure

Each idea is first explained briefly. After that, the same set of questions is asked to ensure consistent and comparable evaluation. Responses should be recorded directly under each question.

Idea 1

Governance based reproducibility policy

This idea treats the problem as a lack of clear rules and accountability. It introduces a formal policy that defines what must be documented, who is responsible, and what minimum standards must be met. Its focus is on creating consistency through enforced expectations across all projects.

1. What is your first reaction to this idea?
Answer:
2. How well does this fit the real VCH context?
Answer:
3. What is the biggest strength of this idea?
Answer:
4. What is the biggest weakness of this idea?
Answer:
5. Would you keep, reject, or combine this idea?
Answer:

6. How would you improve it?

Answer:

7. In practice, how would this actually work inside the VCH Lab?

Answer:

8. Which specific problem from current VCH projects does this idea solve?

Answer:

Idea 2

Stage gate research lifecycle model

This idea treats the problem as a failure of process timing. It structures projects into defined stages, where required documentation must be completed before progressing. Its focus is on ensuring documentation happens at the right moments during the research process.

1. What is your first reaction to this idea?

Answer:

2. How well does this fit the real VCH context?

Answer:

3. What is the biggest strength of this idea?

Answer:

4. What is the biggest weakness of this idea?

Answer:

5. Would you keep, reject, or combine this idea?

Answer:

6. How would you improve it?

Answer:

7. In practice, how would this actually work inside the VCH Lab?

Answer:

8. Which specific problem from current VCH projects does this idea solve?

Answer:

Idea 3

Standardized documentation template system

This idea treats the problem as inconsistent documentation practices. It introduces structured templates that guide how interviews, analysis, decisions, and validation are recorded. Its focus is on creating consistency in how research is documented across projects.

1. What is your first reaction to this idea?
Answer:
2. How well does this fit the real VCH context?
Answer:
3. What is the biggest strength of this idea?
Answer:
4. What is the biggest weakness of this idea?
Answer:
5. Would you keep, reject, or combine this idea?
Answer:
6. How would you improve it?
Answer:
7. In practice, how would this actually work inside the VCH Lab?
Answer:
8. Which specific problem from current VCH projects does this idea solve?
Answer:

Idea 4

Repository and metadata architecture redesign

This idea treats the problem as poor storage and retrieval of research. It redesigns how files are organized by introducing a clear repository structure, naming rules, and metadata that explain each file. Its focus is on making research outputs findable, understandable, and reusable.

1. What is your first reaction to this idea?
Answer:
2. How well does this fit the real VCH context?
Answer:
3. What is the biggest strength of this idea?
Answer:
4. What is the biggest weakness of this idea?
Answer:
5. Would you keep, reject, or combine this idea?
Answer:
6. How would you improve it?
Answer:
7. In practice, how would this actually work inside the VCH Lab?
Answer:
8. Which specific problem from current VCH projects does this idea solve?
Answer:

Idea 5

Digital traceability platform or dashboard

This idea treats the problem as a lack of visibility in the research process. It introduces a digital system where data, decisions, and progress are tracked and connected in real time. Its focus is on making the full research process visible and traceable as it happens.

1. What is your first reaction to this idea?
Answer:
2. How well does this fit the real VCH context?
Answer:
3. What is the biggest strength of this idea?
Answer:
4. What is the biggest weakness of this idea?
Answer:
5. Would you keep, reject, or combine this idea?
Answer:
6. How would you improve it?
Answer:
7. In practice, how would this actually work inside the VCH Lab?
Answer:
8. Which specific problem from current VCH projects does this idea solve?
Answer:

Idea 6

Training and behavioral adoption model

This idea treats the problem as a lack of awareness and consistent behavior. It focuses on training, guidance, and reinforcement to help students understand and apply proper documentation practices. Its focus is on improving how people work rather than changing systems.

1. What is your first reaction to this idea?
Answer:
2. How well does this fit the real VCH context?
Answer:

3. What is the biggest strength of this idea?
Answer:
4. What is the biggest weakness of this idea?
Answer:
5. Would you keep, reject, or combine this idea?
Answer:
6. How would you improve it?
Answer:
7. In practice, how would this actually work inside the VCH Lab?
Answer:
8. Which specific problem from current VCH projects does this idea solve?
Answer:

Idea 7

Integrated socio technical reproducibility framework

This idea treats the problem as a system level issue where structure, process, and behavior are not aligned. It combines the strongest elements of governance, lifecycle structure, repository design, and system integration into one coherent framework. Its focus is on aligning all parts of the research process so documentation becomes consistent, traceable, and reusable from start to finish.

1. What is your first reaction to this idea?
Answer:
2. How well does this fit the real VCH context?
Answer:
3. What is the biggest strength of this idea?
Answer:
4. What is the biggest weakness of this idea?
Answer:
5. Would you keep, reject, or combine this idea?
Answer:
6. How would you improve it?
Answer:
7. In practice, how would this actually work inside the VCH Lab?
Answer:
8. Which specific problem from current VCH projects does this idea solve?
Answer:

Final Comparison Questions

9. Which idea is the strongest starting point?

Answer:

10. Which idea would you reject?

Answer:

11. Should the final solution combine multiple ideas?

Answer:

12. If yes, which ideas should be combined?

Answer:
