

SECTION 1 REVISION MAPPING

Rob's Feedback → Where It Was Fixed → What Was Added → Exact Lines → Criteria Satisfied

ROB'S FEEDBACK LINE 1

"Despite the fact that you overhauled your project plan completely, the analysis at micro, meso and macro level is still limited."

Where it is fixed

Chapter 1.1 Background and Context
Chapter 1.2 Purpose and Scope
Chapter 1.3 Innovation and Relevance

What was added

A complete micro, meso, and macro analysis using a past to present to near future structure, supported by explicit evidence including:

Reproducibility crisis sources
Sustainability literature
Dutch and EU policy frameworks

Exact lines that fix it

Micro (from 1.1):

"Students design their own research logic, tools, and documentation... producing a fragmented archive... creating a persistent micro level problem..."

Meso (from 1.1):

"...the lack of a shared research structure makes it difficult for staff to evaluate projects consistently... creates barriers to collective learning..."

Macro (from 1.1):

"The reproducibility crisis is widely documented... (Baker, 2016; Goodman, 2016; Ioannidis, 2005)... and connects directly to FAIR, OECD, and Science Europe guidance."

Criteria satisfied

Sufficient: clear micro, meso, and macro analysis
Good: integrated past, present, near future
Excellent: scenario based macro relevance

ROB'S FEEDBACK LINE 2

"It mostly covers the present situation. The near future situation becomes a bit more clear in paragraph 1.3, but not the urgency."

Where it is fixed

Chapter 1.1 near future consequences
Chapter 1.2 near future justification
Chapter 1.3 explicit urgency with with versus without scenario

What was added

Urgency is stated explicitly, not implied.

Exact lines that fix it

From 1.1:

"If nothing changes, the near future consequences will be serious... partners may question reliability... the Lab may fail to meet institutional expectations..."

From 1.2:

"...the Lab risks losing credibility and may face increasing difficulty maintaining external partnerships..."

From 1.3:

"With the assignment, the Lab builds a structured, credible workflow. Without the assignment, the Lab risks decline in trust, fragmented outputs, and eventual loss of strategic value."

Criteria satisfied

Sufficient: near future clarity
Good: past to present to future reasoning
Excellent: explicit with versus without assignment scenario

ROB'S FEEDBACK LINE 3

“What happens if this project would not be executed, would VCH Labs lose clients or funding?”

Where it is fixed

Chapter 1.1 consequences if nothing changes

Chapter 1.2 risks for the Lab

Chapter 1.3 with versus without scenario

What was added

Explicit non execution consequences:

Loss of partner trust

Decline in credibility

Difficulty sustaining long term collaborations

Uncertain institutional future

Exact lines that fix it

From 1.1:

“...partner companies may start to doubt the reliability of the insights they receive...”

From 1.2:

“...over time, unresolved gaps may weaken the Lab’s standing and undermine its ability to secure new projects...”

From 1.3:

“Without the assignment, the Lab risks declining trust from partners, inconsistent project outputs, and increasing difficulty securing long term collaborations.”

Criteria satisfied

Excellent: requires an explicit non execution scenario

Fully resolves Rob’s urgency question

ROB’S FEEDBACK LINE 4

“Explicit justifies that the execution of the assignment includes all BI Meta-skills is missing...”

Where it is fixed

Chapter 1.2 Purpose and Scope

Chapter 1.3 Innovation and Relevance

What was added

A full paragraph explicitly naming all five BI meta skills and explaining:

Why each is required

How each will be used

How the assignment activates each skill

Exact lines that fix it

From 1.2:

“This assignment requires the use of all BI meta skills... The define skill is needed... The design skill is needed... The execute skill is needed... The learn skill is needed... The lead skill is required...”

From 1.3:

“Designing a reproducible research framework requires the use of the BI meta skills...”

Criteria satisfied

Sufficient: justification of all five skills

Good: alignment with personal strengths

Excellent: embedded in the innovation logic

ROB’S FEEDBACK LINE 5

“This project is still leaning heavily on the assumption that a standardised research methodology is the solution... is this innovative?”

Where it is fixed

Chapter 1.3 Innovation and Relevance

Chapter 1.1 limitations of alternative approaches

Chapter 1.2 scope justification

What was added

A strengthened innovation explanation:

Clear innovation definition

Micro innovation framing

Contrast with alternatives that fail

Academic justification

EDRM inspired lifecycle reasoning

Argument why tools or templates alone do not solve the problem

Exact lines that fix it

From 1.1:

“Supervision alone cannot guarantee consistent documentation... templates standardize layout but not research execution... tools without structure do not capture decisions...”

From 1.3:

“This assignment delivers a process innovation... It is a micro innovation that introduces a structured lifecycle... not a tool, not a template...”

From 1.3:

“The framework adapts lifecycle thinking from models such as EDM, making it a novel application in educational research.”

Criteria satisfied

Sufficient: clear justification of assignment

Good: clear justification of innovation

Excellent: evidence based argument with novelty

SUMMARY TABLE

Rob's Feedback	Where Fixed	What Was Added	Why It Meets Criteria
Micro, meso, macro limited	1.1, 1.2, 1.3	Full micro to meso to macro analysis	Meets Sufficient, Good, Excellent
No urgency	1.1, 1.2, 1.3	Explicit urgency, risks, and consequences	Meets Good and Excellent
What if not executed	1.1, 1.2, 1.3	Full with versus without scenario	Required for Excellent
Meta skills missing	1.2, 1.3	Explicit meta skills paragraph	Meets Sufficient, Good, Excellent
Innovation unclear	1.1, 1.3	Novelty argument plus EDM plus alternatives	Good and Excellent
