

GP1 RESIT DIAGNOSTIC AUDIT AND FULL REWRITE PLAN

A complete criteria aligned analysis for the Graduation Project Plan rewrite

This audit presents an accurate, structured evaluation of the GP1 resit submission. It integrates assessor feedback, rubric alignment and targeted rewrite guidance for each section based on the actual scores achieved. The purpose of this document is to give a clear roadmap for improving the GP1 to a fully Sufficient, Good and Excellent level where required.

SUMMARY OF SCORES PER SECTION

- **Section 1 — The Assignment:** 4 out of 8 points → **Sufficient**
- **Section 2 — Research Design:** 6 out of 8 points → **Good**
- **Section 3 — Project Design:** 0 out of 8 points → **Insufficient**

Thus:

- **Section 1 must be improved across all three rubric levels** (Sufficient, Good and Excellent)
 - **Section 2 must be refined at the Good level and expanded to meet Excellent**
 - **Section 3 must be rebuilt entirely from Sufficient → Good → Excellent**
-

SECTION 1 — THE ASSIGNMENT

Score: 4 out of 8 → Sufficient

Assessor Feedback (Full Block)

“Despite the fact that you overhauled your project plan completely, the analysis at micro, meso and macro level is still limited. It mostly covers the present situation. The near future situation becomes a bit more clear in paragraph 1.3, but not the urgency. What happens if this project would not be executed, would VCH Labs lose clients or funding? Explicit justifies that the execution of the assignment includes all BI Meta-skills is missing, but was mentioned last time and can be found partially in chapter 4. This project is still leaning heavily on the assumption that a standardised research methodology is the solution to ensure transparency, validity and reproducibility of the output of the VCH Lab. Question is whether that can be considered innovative. The scope of the project seems to be more rigid as if the solution is already set in stone. Project success has been defined but not clearly specified. How much does transparency in documentation need to be improved, how much stronger does verifiability of results need to be? Stakeholders are a bit more specific, but still not clear what is at stake for them. Deliverables now only seem to be the final deliverables. What about deliverables during the project that Inholland and your client need to assess the status and make decisions on whether and how to proceed?”

Diagnostic Breakdown

You have achieved the base threshold for Sufficient by demonstrating an understanding of the assignment, the client, the VCH Lab context and the general importance of research quality. However, the section lacks the depth, structure and justification required beyond that minimum. It also does not yet show that you independently investigated the past, current and future situation at all levels. The assignment is described, but not fully argued.

At the Sufficient level, the section needs stronger reasoning to show why the assignment is appropriate and needed. The present situation is described, but the past influences and near future implications are not fully explored. The urgency is not clear, and the consequences if the assignment is not executed are missing. The BI Meta-skills must also be explicitly linked to the assignment, not implied or partially mentioned.

At the Good level, the expectations increase. The section must thoroughly examine interrelationships between past events, current issues and future developments at micro, meso and macro levels. Trends influencing transparency, sustainability and applied research need to be linked to VCH Labs. Your personal interests, strengths and ambitions must also be integrated in a more intentional way to show why this assignment is a meaningful learning opportunity for you.

At the Excellent level, the section requires a much deeper and more rigorous justification. You must present near future scenarios with and without the assignment to show urgency. You must also consider alternative solutions, demonstrate why they are insufficient and argue why the chosen direction is the most innovative and viable. The solution cannot be presented as predetermined. Instead, the assignment must be framed as an investigation leading to a

solution. Measurable success criteria for transparency, verifiability and reusability must be formulated.

Rewrite Requirements for Section 1

To reach a complete and excellent standard, the section must:

At the Sufficient level:

- Provide a full past, present and near future analysis at all three levels.
- Argue the urgency and explain the consequences if the assignment is not executed.
- Explicitly map the assignment to all BI Meta-skills.
- Clarify stakeholder stakes and why each stakeholder matters.

At the Good level:

- Integrate trends and developments shaping the assignment context.
- Demonstrate interrelationships between events that lead to the necessity of this assignment.
- Connect the assignment to your strengths, motivation and graduation ambitions.

At the Excellent level:

- Present near-future scenarios with and without the assignment.
 - Consider alternative solutions and justify the chosen direction.
 - Clearly define measurable success criteria.
 - Introduce interim deliverables and monitoring points.
-

SECTION 2 — RESEARCH DESIGN

Score: 6 out of 8 → Good

Assessor Feedback (Full Block)

“You address all points from previous feedback in detail, you add sources to validate the methodological choices and add aspects to make a research plan that is ready to be implemented, however, the Research Design section is sometimes repetitive reducing its clarity.”

Diagnostic Breakdown

This section already meets all Sufficient criteria and most Good criteria. Your research questions are appropriate, your methodology is justified and your plan is operationally realistic. You have demonstrated clear awareness of the data you need to collect and the approach you will use. What limits this section from reaching Excellent is the structural clarity and certain missing advanced elements.

At the Good level, the issue of repetition must be addressed. Some methodological explanations are written more than once in slightly different forms. This reduces clarity and creates unnecessary reading load. The section must be reorganized into a streamlined flow. The feasibility of the research design also needs a more explicit explanation.

At the Excellent level, the absent elements become more noticeable. The section must include a contingency plan for the research. It must list the desk research materials you plan to study and briefly explain their relevance. It must also show how the research plan has been validated through previous or comparable research. These additions would demonstrate advanced preparedness and elevate the section to Excellent.

Rewrite Requirements for Section 2

At the Good level:

- Remove repetition and streamline the structure.
- Explicitly justify the feasibility of the research design.

At the Excellent level:

- Provide a contingency plan considering realistic scenarios.
 - Add a list of desk research materials and explain their relevance.
 - Reference and integrate validation from earlier comparable research.
 - Present the methodological flow in a clear, non redundant and well sequenced structure.
-

SECTION 3 — PROJECT DESIGN

Score: 0 out of 8 → Insufficient

Assessor Feedback (Full Block)

“The scope of the project seems to be more rigid as if the solution is already set in stone. Project success has been defined but not clearly specified. How much does transparency in documentation needs to be improved, how much stronger does verifiability of results need to be? Or will it just rely on comparison through the empirical evaluation? Stakeholders are a bit more specific, but still not clear what is at stake for them. Deliverables now only seem to be the final deliverables. What about deliverables during the project that Inholland and your client need to assess the status and make decisions on whether and how to proceed? Some obvious risks in the execution of the project, and ways to deal with them, are described. Still no planning! How do you expect to pass this if not all required elements are in your plan?”

Diagnostic Breakdown

This section does not meet any Sufficient criteria. The foundational requirements of a project plan are missing. There is no structured timeline, no detailed tasks, no phased breakdown, no Gantt chart, no resource mapping, no stakeholder availability assessment and no progress monitoring system. The framing of the solution is also rigid and contradicts the iterative nature of innovation.

At the Sufficient level, the project plan must first define the scope and specifications. It must identify stakeholders, their stakes, their roles and their availability. All deliverables, tasks, resources and risks must be identified and organised into a feasible structure.

At the Good level, prioritisation must be justified. Secondary stakeholders must be added. Alternative pathways must be considered when resources are limited. The plan must include progress monitoring indicators and a clear scaffolding of tasks.

At the Excellent level, the plan must integrate risk scenarios, stakeholder dynamics and personal learning objectives. It must provide a strong progress control mechanism throughout the project.

Rewrite Requirements for Section 3

At the Sufficient level:

- Build a full timeline covering all sprints and phases.
- Define the scope, criteria and specifications for the end results.
- Identify tasks, deliverables, resources, stakeholders and risks.
- Include interim deliverables and progress indicators.

At the Good level:

- Justify prioritisation decisions and planning choices.
- Add secondary stakeholders and assess their influence.
- Consider alternative paths when resources may not be available.

At the Excellent level:

- Include a scenario based contingency plan.
- Analyse stakeholder dynamics.
- Integrate a personal learning plan into the project design.
- Create a strong progress monitoring and decision making structure.
