GP's Feedback

1) Tangible / Conceptual Solution – Missing Context & Development Process

According to the criteria, your solution must clearly demonstrate what the solution is, why it is needed, who it is for, how it solves the problem, and how it evolved through iterations.

To strengthen this:

Missing / needed:

Clear context description:

- What does the company do?
- What is their challenge?
- How does your solution address this challenge?
- What improvement is expected after implementation?

Clear link with GP2 specifications:

- What were the specs and recommendations from GP2?
-

 2

GP's Feedback

Clear link with GP2 specifications:

- What were the specs and recommendations from GP2?
- How were these used for ideation?
- Where is your idea map?
- How were ideas selected and validated?
- With whom, when, and why were these stakeholders relevant?

Iteration process not fully visible:

- How feedback was incorporated
- What changed between iterations
- What additional sources (desk research, benchmarking, trends, etc.) informed your decisions

Prototypes require more detail:

 3

GP's Feedback

Prototypes require more detail:

- What does each prototype look like?
- What value does each new version add?

Your log shows parts of this thinking, but GP3 requires explicit documentation in the solution report itself.

2) Approach – Validation & Decision-Making

To meet GP3 criteria, user testing and stakeholder validation must be:

- clearly described
- appropriately timed
- conducted with relevant stakeholders
- used to justify choices

Please clarify:

- How many users/stakeholders validated the concepts?
-

4

GP's Feedback

Please clarify:

- How many users/stakeholders validated the concepts?
- What methods did you use (interviews, feedback sessions, tests)?
- What were the key insights?
- How these insights affected your design decisions?
- What could have been improved if ideal conditions were available?

This shows your ability to uncover blind spots, validate assumptions, and apply a rigorous innovation process.

3) Business Case – Requires Significant Strengthening

Your business case is a good start, but the financial and non-financial benefits section currently is too light to meet criteria 3a.

5

GP's Feedback

3) Business Case – Requires Significant Strengthening

Your business case is a good start, but the financial and non-financial benefits section currently is too light to meet criteria 3a.

Please expand:

- Competitive advantage (what makes your solution better?)
 - Target audience characteristics and needs
 - External environment analysis (technology, culture, legal, economic trends)
 - Clear value proposition
 - Detailed cost structure: short-term implementation, investments, operational costs
 - Realistic quantification of benefits
-
- financial: cost savings, revenue
 - non-financial: efficiency, brand value → translated into financial estimates
-

GP's Feedback

This is a very good first draft with clear potential to develop into a successful final version. You demonstrate commitment to the project and a good foundation for all three components.

To reach the “Sufficient” level across the criteria and strengthen the coherence of your full Graduation Project, please address the points below.

GP3 – Solution

Overall remark

Your draft shows promising direction; however, essential components required by the GP3 criteria are missing or underdeveloped, which makes it difficult to fully assess the coherence, validation, and feasibility of the solution.

Below is a detailed overview aligned with the three assessment dimensions.
